19 March 2023

Hello,

My time at the Wisconsin Department of Justice Division of Criminal Investigation has been spent learning various technologies to solve complex problems. I have become an expert in various programs we use to convert and redact records of a variety of formats in compliance with Wisconsin's Public Records Law. Programs such as Adobe Premiere Pro, Axon Investigate, and ffmpeg. I have held multiple training sessions on these programs to increase the Public Records Teams capabilities. Also, I have assisted other teams within WI DOJ in training and obtaining Axon Investigate to aid in converting the voluminous amounts of video they work with. Led projects with multiple disciplinary teams to produce the case files of Officer Involved Critical Incidents for public release. This past summer, I gave presentations to local law enforcement agencies on how the Wisconsin Department of Justice uses technology to manage, redact and produce body worn camera footage for public release. Again, my time in DCI has been spent learning different technologies; however I became curious about how to make them.

In 2020, I decided to go back to school to learn software development. By learning Javascript, HTML, CSS, jQuery, Node.js, MongoDB and Bootstrap I am equipped to aid the Booz | Allen | Hamilton learning new tools to deliver software solutions. My professional experience has honed my collaboration, communication and leadership. My technological skills as mentioned above and demonstrated through my portfolio projects, show I am capable of solving enterprise-scale challenges

Sincerely,

Casey Murphy
